PHASE I ENVIRONMENTAL SITE ASSESSMENT UPDATE

Reference: ENGEO, Phase One Environmental Site Assessment (Draft), Solano County Fairgrounds, Vallejo, California, May 1, 2009, Project No. 8665.000.000.

Dear Mr. Hade:

ENGEO has performed an update of the referenced May 2009 environmental site assessment report prepared for the subject property (Property), located in Vallejo, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

APPENDIX A – Environmental Data Resources, Radius Map Report		

1.0 SITE DESCRIPTION

The Property is located at 900 Fairgrounds Drive in Vallejo, California. The Property is approximately 152 acres in area and is identified by Assessor's Parcel Number (APN) 0052-24-0560. The Property is currently occupied by the Solano County Fairgrounds. Improvements within the fairgrounds include a dirt horse racing track, a golf course, a parking lot, exhibit halls, and horse barns. Review of historical records indicates that the parcel was developed as a fairground between 1947 and 1951. Prior to 1947, the Property was undeveloped.

2.0 PREVIOUS ENVIRONMENTAL REPORTS

In May 2009, ENGEO prepared a Phase I environmental site assessment for the Property. The scope of services of the Phase I included the following:

- A review of publicly available and practically reviewable standard local, state and federal environmental record sources.
- A review of publicly available and practically reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Interviews with owners and public sector officials.
- Preparation of a report with findings and conclusions.

Based on the findings of this assessment, four Recognized Environmental Conditions (RECs) were identified for the Property.

- One 500-gallon above-ground gasoline storage tank and one 2,000-gallon underground gasoline storage tank were removed from the Property in approximately 1993. There is no readily available documentation of the removal of the tanks or evidence of soil sampling/analysis. We recommend that a soil and groundwater investigation be completed to determine if these tanks had leaked and if there are remnant soil impacts.
- A large quantity of fill material was placed within the Property. There is no documentation as to the origins of this fill. A portion of the fill was reportedly derived from construction along Interstate 80. We recommend that a soil investigation be completed to assess whether heavy metal or hydrocarbon-impacted soils were placed as fill within the Property.

- Eight crushed rock filled pits were observed along the western side of the eastern row of horse stables. The approximately 5-foot-deep pits, which are washing areas for horses, also can receive runoff from the area between the horse stalls. Shallow groundwater in the area ranges from 5 to 8 feet below the ground surface. We recommend that a groundwater investigation be completed to assess the potential for groundwater impairments.
- A pole-mounted transformer located within the southwestern area of the Property “boiled over” spilling cooling oil on the ground surface below. None of the stained soil was removed, and given the age of the transformer, it is possible that it contained PCB cooling oil. We recommend limited soil sampling with laboratory testing to determine if cooling oil containing PCBs was discharged to surface soils as described above.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below:

- Each of the facilities located within the Property were constructed at a time when lead-based paints or asbestos-containing building materials may have been used during their construction. We recommend that a lead and asbestos survey be completed on these buildings prior to renovation or demolition.
- The transformers located within the Property were installed at a time when PCB-containing cooling oils were likely to be used. When these transformers are no longer in use, we recommend that they be collected for appropriate disposal.
- We identified an area of chemical storage located within the shop building in the corporation yard in the northeastern area of the Property. We also observed an area of stained soil within the corporation yard in the immediate vicinity of the garbage compactor. We recommend that the chemicals described above be collected for appropriate disposal when they are no longer of use. Additionally, we recommend that the surface soil staining be scarified for appropriate disposal and that confirmation soil sampling and laboratory analysis be completed to provide that an appropriate amount of impacted soil has been excavated.

3.0 SUPPLEMENTAL RECORDS RESEARCH

Environmental Data Resources Inc. (EDR) performed a search of local, state, and federal agency databases regarding the subject parcel and known contaminated sites in the immediate vicinity. A list of databases searched and their corresponding search radii is presented in Appendix A.

3.1 FEDERAL ASTM STANDARD/SUPPLEMENTAL SOURCES

3.1.1 Subject Property

The Property is not listed on the Federal ASTM Standard or supplemental sources.

3.1.2 Other Properties

The following facilities are listed on Federal ASTM Standard or supplemental sources:

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR and dated 06/15/2011, has revealed that there are two RCRA-SQG sites within approximately 0.25 mile of the target property.

3.2 STATE ASTM STANDARD/SUPPLEMENTAL SOURCES

3.2.1 Subject Property

The Property is listed on the following database(s) on State ASTM Standard or supplemental sources.

HIST UST: Historical UST Registered Database.

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES].

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990s. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

Based on a review of these database listings, two underground storage tanks appear to have been located within the Property. These tanks appear to have been removed in 1993 with the site status being listed as “case closed.”

3.2.2 Other Properties

The following database(s) include(s) facilities listed within the appropriate ASTM search distances of the Property on State ASTM Standard or supplemental sources.

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR and dated 08/09/2011, has revealed that there are eight LUST sites within approximately 0.5 mile of the target property.

These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services. A review of the DRYCLEANERS list, as provided by EDR, and dated 06/28/2011 has revealed that there is one DRYCLEANERS site within approximately 0.25 mile of the target property.

T & J CLEANERS

950 ADMIRAL CALLAGHN

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. Properties that are on the "Orphan Summary" list appear to be located beyond the ASTM recommended radius search criteria.

4.0 SITE RECONNAISSANCE

4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on September 26, 2011. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The site was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks.

4.2 GENERAL SITE SETTING

The Property is currently utilized as the Solano County Fairgrounds. Within the grounds, multiple uses, both seasonal and year round are in place. Buildings currently in place include: administrative offices, a horse racing simulcast building, two general exhibit halls, storage buildings, conference center, maintenance building, a rock/gem club, a day care facility, a corporation yard, two livestock exhibit halls, an outdoor concert venue, RV parking, a horse race viewing facility, a dirt horse track, a 9-hole golf course, a horse screening building, locker rooms, restroom buildings, a small fire station, horse stables, gravel-covered parking areas, and paved parking areas.

4.3 EXTERIOR OBSERVATIONS

Hazardous Substances and Petroleum Products in Connection with Identified Uses. Multiple 55-gallon drums, 5-gallon buckets, and other containers with hydraulic oil, motor oil, and used oils were observed within the vehicle maintenance building located in the corporation yard. Small areas of petroleum staining were observed on the concrete slab of the building. The bulk storage containers were each located within a secondary containment device.

Storage Tanks. A Convault above-ground fuel storage tank was observed at the south end of the horse racing track. This tank is reportedly 2,000 gallons in capacity and is partitioned for both gasoline and diesel fuel storage.

Odors. No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.

Pools of Potentially Hazardous Liquid. No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.

Drums. With the exception of the drums identified in the “Hazardous Substances and Petroleum Products in Connection with Identified Uses” section above and the drums used as garbage containers throughout the Property, no other storage drums were observed on the Property at the time of the reconnaissance.

Hazardous Substance and Petroleum Product Containers. With the exception of the materials identified in the “Hazardous Substances and Petroleum Products in Connection with Identified Uses” section above, no other hazardous substance and petroleum product containers were observed on the Property at the time of our reconnaissance.

Polychlorinated Biphenyls (PCBs). Approximately 15 ground mounted transformers and 12 pole-mounted transformers were identified within the Property at the time of our reconnaissance. It is our understanding that most of these transformers were installed at a time when PCB-containing cooling oils would have been used. Some staining was noted on the ground surface at the base of several of the transformers.

Pits, Ponds and Lagoons. One small pond was observed within the southern area of the golf course. In addition, eight crushed rock filled pits are situated along the western side of the eastern row of horse stables.

Stained Soil/Pavement. An area of concrete and soil staining was observed adjacent to the garbage compactor located within the corporation yard at the northeastern corner of the Property.

Stressed Vegetation. No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.

Solid Waste/Debris No disposal of solid waste was observed at the subject Property.

Wastewater. Multiple concrete-lined horse wash areas are located in the western area of the horse stalls. According to interviews conducted during the 2009 ESA, the fairgrounds operations manager indicated these features are plumbed to the local sanitary sewer. Additionally, eight crushed rock filled pits were observed along the western side of the eastern row of horse stables.

Wells. No wells were observed within the Property at the time of our reconnaissance. Four piezometers installed in April 2009 were previously observed, which were part of the preliminary geotechnical investigation of the Property. It is not clear if these piezometers remain onsite.

Septic Systems. No septic systems were found within the Property during our reconnaissance.

5.0 CONCLUSIONS

The site reconnaissance and supplemental records review found evidence of potential soil or groundwater impairments associated with the use of the Property. A review of regulatory agency records and available databases did not identify contaminated facilities within the appropriate ASTM search distances that would be expected to affect the planned use of the Property.

Based on the findings of this assessment, four Recognized Environmental Conditions (RECs) were identified for the Property.

- One 500-gallon above-ground gasoline storage tank and one 2,000-gallon underground gasoline storage tank were removed from the Property in approximately 1993. There is no documentation of the removal, or evidence of soil sampling or laboratory analysis. We recommend that a soil investigation be completed to determine if these tanks had leaked and if there are remnant soil impacts.
- A large quantity of fill material was placed within the Property. There is no documentation as to the origins of this fill. A portion of the fill was reportedly derived from construction along Interstate 80. We recommend that a soil investigation be completed to assess whether heavy metal or hydrocarbon-impacted soils were placed as fill within the Property.
- Eight crushed rock filled pits were observed along the western side of the eastern row of horse stables. These approximately 5-foot-deep pits are washing areas for horses that also have the potential to receive runoff from the area between the horse stalls. Shallow groundwater in the area ranges from 5 to 8 feet below the ground surface. We recommend that a groundwater investigation be completed to assess potential impacts to shallow groundwater from animal waste washing into these pits.
- A pole-mounted transformer located within the southwestern area of the Property “boiled over” spilling cooling oil on the ground surface below. None of the stained soil was removed, and given the age of the transformer, it is possible that PCB-containing cooling oil was used. We recommend limited soil sampling and laboratory testing be completed to determine if PCB-containing cooling oil was discharged to surface soils as described above.

Based on the review of regulatory databases and the findings of the site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below:

- Each of the facilities situated within the Property were constructed at a time when lead-based paints or asbestos-containing building materials may have been used during their construction. We recommend that a lead and asbestos survey be completed on these buildings prior to renovation or demolition.
- The transformers located within the Property were installed at a time when PCB-containing cooling oils were likely to be used. When these transformers are no longer in use, we recommend that they be collected for appropriate disposal.
- An area of chemical storage was identified in the shop building within the corporation yard located in the northeastern area of the Property. We also observed an area of stained soil within the corporation yard in the immediate vicinity of the garbage compactor. We recommend that the chemicals described above be collected for appropriate disposal when they are no longer of use. Additionally, we recommend that the areas of surface soil staining be scarified for appropriate disposal and that confirmation soil sampling and laboratory analysis be completed to provide that an appropriate amount of impacted soil has been excavated.

6.0 LIMITATIONS AND UNIFORMITY OF CONDITIONS

The recommendations and conclusions presented in this environmental site assessment update were based on the findings of the referenced report, along with supplemental record research, and a physical inspection of the Property. The findings of the report are based in part on contracted database research and personal communications. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services.

This document must not be subject to unauthorized reuse; that is reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are typically valid for 180 days after completion of the report, particularly with regard to the regulatory database files. In some instances, the shelf life of the report can be less.

This phase I environmental site assessment update is not intended to represent a complete soil or groundwater characterization. This assessment does not define the depth or extent of soil or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include detailed subsurface exploration with laboratory testing of soil and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities, and from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for PCBs, or a mold survey.

Visual observations referenced in this report are intended only to represent site conditions at the time that this report was prepared. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage that occurred subsequent to this report.

ENGEO has prepared this report for the exclusive use of our client, Michael Brandman Associates. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 08/09/2011 has revealed that there are 8 LUST sites within approximately 0.5 miles of the target property.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.
