CONDITIONS COVERING THE USE OF FIELD FUMIGANTS

**METAM-SODIUM, METAM-POTASSIUM, DAZOMET, CHLOROPICRIN, 1,3-DICHLOROPROPENE,
METHYL BROMIDE, SODIUM TETRATHIOCARBONATE**

DPR suggested permit conditions for the fumigants being used will be issued to you with your permit. These conditions must be followed in addition to regulations and label requirements.

A fumigant application worksite plan must be received at least 9 days prior to intended application date. Templates are available from the Agricultural Commissioner's office.

NOIs can only be submitted once fumigant application worksite plan has been approved. A 48-hour NOI is required prior to use of any field fumigant in Solano County.

The review process can be lengthy and complex, please plan accordingly. This will include, but is not limited to, an on-site visit to confirm distances to occupied structures, assessment of application equipment including chemigation systems and closed systems used for material transfer, confirmation that monitoring devices have been obtained, review of the fumigation management plan, and assurance that appropriate safety training such as respirator training has been conducted for applicators prior to the application.

The continued availability of these materials is based on the safety measures that have been adopted to prevent offsite movement and worker/bystander exposure. Label changes, regulations and permit conditions provide for the continued use of these products as tools in integrated pest management systems.
